Question **2**Correct
Marked out of 5.00

Flag question

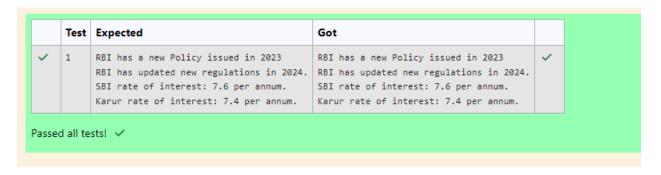

```
RBI issues all national banks to collect interest on all customer loans.
Create an RBI interface with a variable String parentBank="RBI" and abstract method rateOfInterest().
RBI interface has two more methods default and static method.
default void policyNote() {
System.out.println("RBI has a new Policy issued in 2023.");
static void regulations(){
System.out.println("RBI has updated new regulations on 2024.");
Create two subclasses SBI and Karur which implements the RBI interface.
Provide the necessary code for the abstract method in two sub-classes.
Sample Input/Output:
RBI has a new Policy issued in 2023
RBI has updated new regulations in 2024.
SBI rate of interest: 7.6 per annum.
Karur rate of interest: 7.4 per annum.
For example:
Test Result
      RBI has a new Policy issued in 2023
      RBI has updated new regulations in 2024.
      SBI rate of interest: 7.6 per annum.
      Karur rate of interest: 7.4 per annum.
```

```
// RBI Interface
interface RBI {
    String parentBank = "RBI"; // Interface variable

// Abstract method
    double rateofInterest();

// Default method
    default void policyNote() {
        System.out.println("RBI has updated new regulations in 2024.");
}
```

```
}
  // Static method
  static void regulations() {
     System.out.println("RBI has a new Policy issued in 2023");
  }
}
// SBI Class implementing RBI Interface
class SBI implements RBI {
  @Override
  public double rateofInterest() {
     return 7.6;
  }
}
// Karur Class implementing RBI Interface
class Karur implements RBI {
  @Override
  public double rateofInterest() {
     return 7.4;
  }
}
// Main Class to execute the program
public class Main {
  public static void main(String[] args) {
     // Calling static method from RBI interface
     RBI.regulations();
     // Creating instances of SBI and Karur
     SBI sbiBank = new SBI();
     Karur karurBank = new Karur();
     // Calling default method from RBI interface
     sbiBank.policyNote();
     //karurBank.policyNote();
     // Printing rate of interest for each bank
     System.out.println("SBI rate of interest: " + sbiBank.rateofInterest() + " per annum.");
     System.out.println("Karur rate of interest: " + karurBank.rateofInterest() + " per annum.");
  }
}
```

Question **3**Correct
Marked out of 5.00

Flag question

```
Create interfaces shown below.
interface Sports {
public void setHomeTeam(String name);
public void setVisitingTeam(String name);
interface Football extends Sports {
public void homeTeamScored(int points);
public void visitingTeamScored(int points);}
create a class College that implements the Football interface and provides the necessary functionality to the abstract methods.
sample Input:
Rajalakshmi
Saveetha
22
21
Output:
Rajalakshmi 22 scored
Saveetha 21 scored
Rajalakshmi is the Winner!
For example:
Test Input
                   Result
      Rajalakshmi Rajalakshmi 22 scored
      Saveetha Saveetha 21 scored
      22
                   Rajalakshmi is the winner!
      21
```

## import java.util.Scanner;

```
// Sports Interface
interface Sports {
   public void setHomeTeam(String name);
   public void setVisitingTeam(String name);
}

// Football Interface extending Sports
interface Football extends Sports {
   public void homeTeamScored(int points);
   public void visitingTeamScored(int points);
}
```

// College class implementing Football interface

```
class College implements Football {
  private String homeTeam;
  private String visitingTeam;
  private int homeTeamPoints;
  private int visitingTeamPoints;
  // Implementing setHomeTeam method
  @Override
  public void setHomeTeam(String name) {
    this.homeTeam = name;
  }
  // Implementing setVisitingTeam method
  @Override
  public void setVisitingTeam(String name) {
     this.visitingTeam = name;
  }
  // Implementing homeTeamScored method
  @Override
  public void homeTeamScored(int points) {
     this.homeTeamPoints = points;
  }
  // Implementing visitingTeamScored method
  @Override
  public void visitingTeamScored(int points) {
    this.visitingTeamPoints = points;
  }
  // Method to display the result
  public void displayResult() {
     System.out.println(homeTeam + " " + homeTeamPoints + " scored");
     System.out.println(visitingTeam + " " + visitingTeamPoints + " scored");
     if (homeTeamPoints > visitingTeamPoints) {
       System.out.println(homeTeam + " is the winner!");
     } else if (visitingTeamPoints > homeTeamPoints) {
       System.out.println(visitingTeam + " is the winner!");
    } else {
       System.out.println("It's a tie match.");
 }
```

```
// Main class to execute the program
public class Main {
  public static void main(String[] args) {
     Scanner scanner = new Scanner(System.in);
    // Reading input dynamically
     String homeTeam = scanner.nextLine();
                                                 // First input: Home team name
     String visitingTeam = scanner.nextLine();
                                                // Second input: Visiting team name
     int homeTeamScore = scanner.nextInt();
                                                 // Third input: Home team score
     int visitingTeamScore = scanner.nextInt();
                                                // Fourth input: Visiting team score
    // Creating an instance of College class
     College collegeMatch = new College();
     // Setting teams and scores
     collegeMatch.setHomeTeam(homeTeam);
     collegeMatch.setVisitingTeam(visitingTeam);
     collegeMatch.homeTeamScored(homeTeamScore);
     collegeMatch.visitingTeamScored(visitingTeamScore);
     // Displaying the result
     collegeMatch.displayResult();
  }
}
```

	Test	Input	Expected	Got	
~	1	Rajalakshmi Saveetha 22 21	Rajalakshmi 22 scored Saveetha 21 scored Rajalakshmi is the winner!	Rajalakshmi 22 scored Saveetha 21 scored Rajalakshmi is the winner!	~
~	2	Anna Balaji 21	Anna 21 scored Balaji 21 scored It's a tie match.	Anna 21 scored Balaji 21 scored It's a tie match.	~
